

## Holder kit

### Mounting information

The holder kit is accessory to the power controllers PCU-5, PCU-5TC or our Grip Heating Systems Deluxe. It offers a simple & elegant mounting option for the push button on naked bikes. The holder kit is attached to the clutch lever or mirror terminal by means of a M6 screw.

### Variants

The holder kit is available in 4 different versions. Choose the one that fits best to your motorcycle. Use the included spacer to raise the mounting level by 7.5 mm if required. This is particularly useful for clutch lever or mirror terminal with countersunk Allen screws.

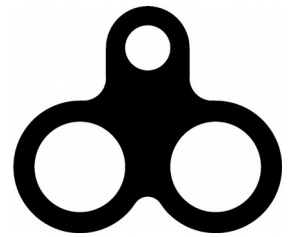

Holder kit straight  
Art. No. 1199  
17.5 x 30 mm

Holder kit 45°  
Art. No. 1200

Holder kit 90°  
Art. No. 1201  
32.2 x 30 mm

Holder kit double  
Art. No. 1202  
35.4 x 30 mm

Original size. Bore: 6 mm / Hole for push button: 12 mm

**Hint:** Print on A4 sized paper, cut out & check fitment before ordering.

### Safety advise

The holder kit is attached to the clutch lever or mirror terminal by means of a M6 screw. Make sure that the necessary depth of engagement of the M6 screw is given under all circumstances. If necessary, use a longer screw, especially when the spacer is used additionally.

Tighten the M6 screw to the correct torque specified by the vehicle manufacturer.
